

André Kreutzer

Sr. QA Engineer / SDET — Playwright · C# · API · Mobile · AI-assisted QA

+55 41 99891-8672 | andre.kreutzer@outlook.com | linkedin.com/in/andrejkj | andrelkj.github.io | github.com/andrelkj | Curitiba, Brazil · Remote

Sr. QA Engineer / SET with 4+ years building test automation for fintech and iGaming platforms across web, iOS, and Android: Playwright (C#/.NET, TypeScript) and Cypress, API testing and mocking (Postman, Charles Proxy, Mockoon), and native mobile with XCUITest and Espresso. Experienced owning cross-platform regression, framework migrations, and test strategy end to end in remote teams, and building AI-assisted workflows that cut test-planning and regression time. Next focus: **testing AI products and AI engineering for QA**.

CORE SKILLS

Web Automation: Playwright (C#/.NET and TypeScript, POM) · Cypress (E2E + component) · cypress-axe

Mobile Testing: XCUITest (iOS) · Espresso (Android) · BrowserStack · Sauce Labs · Android Studio & iOS simulators

API Testing: Postman · Charles Proxy · Mockoon (mocking) · REST validation · backend integration testing

Languages & Data: C# · TypeScript · JavaScript · SQL (MySQL, SQL Server)

CI/CD & Observability: GitLab CI · GitHub Actions · Cypress Cloud · Datadog · Grafana

Testing Practice: Test Strategy & Planning · Exploratory & Functional Testing · Accessibility (WCAG 2.2 AA) · Process Improvement

AI-Driven QA: MCP-based test generation · AI code review gating · requirements-to-test-plan automation · Claude Code

PROFESSIONAL EXPERIENCE

SET (Software Engineer in Test) — Kaizen Gaming Athens, Greece (Remote)

Jan 2025 – Present

Playwright · C# · XCUITest · Espresso · Charles Proxy · Grafana

- Initiated a **QA Revamp** to refactor and clean up the automated test suite and track its results, so test failures are trusted and acted on.
- Designed mocking strategies for real-data-dependent UI (player stats, momentum charts), resolved recurring Playwright mocking failures, built web suites from scratch, and extended live/pre-event and lineup stats coverage from backend through Web, Android, and iOS.
- Replaced manual localization spot-checks with an automated, Transifex-backed translation regression suite for offer modals.
- Owned weekly full-platform (iOS/Android/Web) regression testing for the Sportsbook streaming product for 12+ months.**
- Led technical spikes that informed architecture decisions, including a PoC for a unified streaming endpoint, while supporting cross-team regression across 6+ release cycles.

Sr. QA Engineer — Questrade Toronto, Canada (Remote)

Mar 2023 – Sep 2026

Cypress · Playwright · TypeScript · SQL · Postman · BrowserStack · Agile

- Led QA for a 500+ page site migration** (Sitefinity → Contentful/Next.js) across functional and non-functional checks (accessibility, SEO, EN/FR parity, security/logging, consent compliance); surfaced 10+ production defects, including a critical pre-consent tracking gap, and drove the launch go/no-go across 72 tracked test cases.
- Ran it shift-left (local test runs during development, component tests built alongside new components) and AI-assisted end to end, from requirement analysis to the Cypress E2E architecture.
- Led two successive framework migrations:** Robot Framework → Playwright for a faster, more reliable and maintainable suite, cutting regression execution time by 80%+; then Playwright → Cypress to gain stable component testing, broader coverage for the migrated site, and Cypress Cloud traceability and reporting.
- Built a new product's QA architecture from scratch: smoke/sanity/regression taxonomy, cypress-axe accessibility scans, data-driven redirect tests, and multi-environment support.
- Built an MCP-based AI workflow that generates full E2E and page-level suites in under 1 hour, and a QA Companion tool that cut test planning from 3–4 days to ~2 hours.
- Automated 200+ functional tests and added AI-assisted pre-PR code review gating, increasing device coverage and reducing review churn.

Software QA Analyst — Tunts.Rocks | AOA Technology Curitiba, Brazil

Jun 2020 – Jan 2023

Functional Testing · Jira · Postman · Agile

- Owned test planning and scenario-based edge-case coverage for product releases, improving defect prevention ahead of launch.
- Drove process improvements to functional testing workflows, maintaining multi-platform stability across release cycles.

SELECTED PROJECT

Portfolio — andrelkj.github.io AI-ASSISTED

2026

HTML/CSS/JS · GitHub Actions · GitHub Pages · axe-core · Claude Code

- Rebuilt my portfolio as a live case study of AI-assisted work with Claude Code (audit → plan → iterate → verify), directing content and UX decisions and reviewing every change; the process is [documented on the site](#).
- Verified like a release: 0 axe-core WCAG 2.2 AA violations, responsive checks at 375/768/1280 px, 44 px+ tap targets, full EN/PT-BR coverage; shipped in reviewable commits via GitHub Actions.

EDUCATION, AWARDS & LANGUAGES

A.S., Analysis and Systems Development — Descomplica, Curitiba, Brazil (GPA 9.36/10) — Jun 2025

Coursework: CS50x (Harvard), QA Automation Training Program, Cypress eXpress, OneBitCode, ZombiePlus, Gravidade Zero

Act to Impact Award — Questrade, Nov 2023 — for initiative and leadership in automating tests on one of the project's main flows

Languages: Portuguese (native) · English (full professional) · Spanish (elementary)
